## De-skunk Recipe

- 1 quart peroxide
- 1/4 cup baking soda
- 2 tablespoons dishwashing liquid

Mix in bucket and sponge on dog. Rinse off. The odor will be **\*GONE\***.  
You can double/quadruple the recipe to make 1/2 gallon - 1 gallon  
depending on  
the size and length of coat of the affected dog.

Remember this, too - the stuff is safe (don't get it in eyes, though) but,  
"A Word of Caution"

**"Do Not"** try to bottle it or try to put it in a closed container. The  
byproduct of the chemical reaction produced is oxygen and contained, the  
stuff is explosive. Also, it should be used as soon as it's mixed up.  
The reaction doesn't last long.

Wash pet promptly and thoroughly, work the solution deep into the fur. Let your nose guide you, leave the solution on about 5 minutes or until the odor is gone. Some heavily oiled areas may require a "rinse and repeat" washing.

Skunks usually aim for the face, but try to keep the solution out of the eyes - it stings. If you have any cuts on your hands you might want to wear latex gloves for the same reason.

After treatment, thoroughly rinse your pet with tepid tap water.

Pour the spent solution down the drain with running water.

NEVER, ever, store mixed solution in a closed bottle, sprayer, etc. Pressure will build up until the container bursts. This can cause severe injury.
